

# RUSTLESS

Technical Data	<b>Rust Remover &amp; Surface Renovator</b>	
	<b>DESCRIPTION:</b>	Bright pink viscous liquid, with slight acrid odour.
<b>USED FOR:</b>	Rustless is a high quality rust remover and surface renovator that adequately prepares surfaces for refinishing, while protecting surfaces from further corrosion and rusting. It is used in many industries to renovate metal equipment, machinery, stairwells, bridges, tanks, valves, pipes, etc.	
<b>ADVANTAGES:</b>	It is thixotropic for vertical cling to renovate the surfaces, remove corrosion and rust while slightly etching the metal for better paint adhesion. It can be used in dip tank operations and does not produce hazardous fumes. It is safe for use on steel and aluminum fasteners. Rustless can be diluted with up to three parts water for removal of light coatings of rust. May be left on surfaces for later re-preparation. Thixotropic for vertical cling on surfaces. Promotes better paint adhesion. No hazardous fumes. No harsh chlorinated solvents. Water dilutable.	
<b>DIRECTIONS:</b>	<p><b>General Preparation</b> Remove loose, flaking rust and dirt. Swab over an area with Rustless. Depending on the severity of rust build up allow 2-20 minutes reaction time. For heavy deposits repeat as necessary, rinsing if possible between applications. For vertical surfaces, apply a heavy coating and allow a longer time for total reaction. Wipe off excess and allow to dry if an unpainted rust resistant surface is desired.</p> <p><b>Re-Painting</b> If surface is to be re-painted, rinse off all Rustless residue and dissolved rust. Rinse surface thoroughly. Dry thoroughly before painting. Do not paint over Rustless residues.</p> <p><b>Light Coatings:</b> For light coatings of rust, Rustless may be diluted up to three parts water to one part Rustless.</p> <p><b>Dip Tanks:</b> Use Rustless diluted with one to three parts water. Dip tank must be plastic or plastic lined.</p> <p><b>Galvanized Surfaces:</b> Where galvanized surfaces have developed "white" rust, due to decay of the galvanizing, Rustless can be used. Confine application to small areas that require renovation. Rustless will remove decayed galvanizing as well as regular galvanizing. Surface will require reapplication of a galvanic coating such as Rustless, to re-instate corrosion protection.</p>	
	<b>Package Size: (code)</b>	22.7 L 263711      4x4 L 263706
